

# Using AirWatch BYOD, NV Energy Supplies Mobile Power to Employees

## The Challenge

Serving Nevada residents for more than 150 years, NV Energy is one of the largest and fastest growing energy companies. With an employee base of 2,800 people, NV Energy is publically listed on the New York Stock Exchange (NYSE: NVE) and provides electricity to more than 2 million citizens. NV Energy needed to manage their mobile device fleet making the transfer of information and corporate communication seamless and secure. Recently, NV Energy chose AirWatch® to meet their enterprise mobility needs and demands.

## The Client

NV Energy executives heeded the call from employees who increasingly wanted access to corporate email, calendars, and contacts on personal mobile devices. Executives also preferred to choose what device they used for work. The AirWatch Mobile Device Management (MDM) solution enables NV Energy to support a variety of devices without having to worry about the security of corporate data. Employees benefit from Bring Your Own Device (BYOD) policies that allow corporate information to be accessed on personal devices, while enabling personal information to coexist. NV Energy employees agree having access to corporate and personal information on one device is productive and satisfying. Joseph Mongelluzzo, network manager for NV Energy, explains that AirWatch allows NV Energy to provide mobile device applications while regulating and safeguarding data. The most important feature for employees was access to corporate email on mobile devices. For the IT department, the objective was to set and enforce compliance with security policies. Both are possible with AirWatch.

### Solution Overview

- Customer: NV Energy
- Industry: Utilities
- Geography: North America
- Features: MDM, SEG, BYOD
- Devices: 500-1,000

## The Solution

NV Energy uses AirWatch to support a variety of mobile devices including Android™ and Apple iOS®. Leadership thanked the IT department in several business units for offering more mobile device choices through BYOD. AirWatch equips NV Energy to handle any

mobility challenge by offering a wide variety of device possibilities. Without AirWatch, the company would not offer support for non-Blackberry® devices. AirWatch allows for easy management of corporate data on personal devices with the IT console. NV Energy also said that everything went as planned with great pre- and post-sale support.

NV Energy receives corporate email through Microsoft Exchange and VPN Services through Junos Pulse. AirWatch is able to integrate with the current enterprise architecture and NV Energy's preferred applications. Instantaneous email delivery is vital for NV Energy, because it allows NV Energy executives to deliver immediate responses. With the MDM solutions from AirWatch, NV Energy can serve their constituents that much faster.
